

**Western  
Heritage**

## Archaeology and Heritage Management

For over 20 years, resource development industries, including mining, forestry, and oil and gas, have relied on Western Heritage for specialized heritage compliance and information needs. With decades of industry experience, our senior management team can provide solutions to ensure regulatory compliance as quickly and cost effectively as possible.

With offices across Canada, we have unparalleled speed of access to project areas and a thorough understanding of the local regulatory environment. In addition, we have extensive experience delivering collaborative solutions with other service providers. We are ENFORM COR safety certified, and are able to handle heritage management needs through all phases of development, from initial surveying to post project analysis. Our specialized services include:

### **Archaeology and Heritage Management**

Western Heritage specializes in providing archaeological and heritage management services to ensure compliance with local and federal regulations.

- Historical resource impact assessments and overviews (HRO's, HRIA's)
- Stage 1, 2, 3, and 4 investigations
- Heritage screening
- Surveying
- Assessment
- Site Excavation
- Mitigation

### **Geoarchaeology**

Western Heritage is the first firm in Canada to offer specialized geoarchaeology services, which are used to provide time and cost savings to our clients.

- Detailed stratigraphic mapping
- Soil micromorphology
- OSL profiling

### **Near Surface Geophysics**

Western Heritage utilizes near surface geophysics to assist in projects where invasive archaeology is not an option, such as inside buildings and in cemeteries.

- Non-intrusive investigations
- Ground penetrating radar
- Fluxgate gradiometer
- Magnetic susceptibility
- Soil susceptibility
